

Space Needs Assessment

Group Mackenzie was contracted to provide professional services to the City of West Linn for evaluating the existing facilities and future needs for a new consolidated police facility (including police and municipal court) that would allow thirty-year growth for the department. This study has been formatted to document each of the steps completed during this space needs assessment.

Services provided to complete this study included: Architectural, Land Use Planning, and Construction Cost Estimating services.

These design concepts are preliminary drawings to aid in cost estimating. The final design features of the facility will be further evaluated with community input once the bond measure passes.
